

End Pressure Test/Tether Problems.

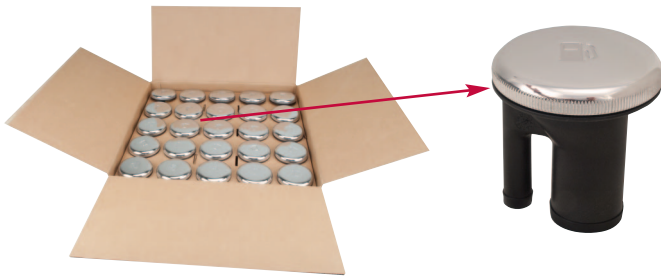

NEW from PERKO®
Quick Snap tethers - No more...

- Tedious connections
- Lost small screws or
- Wasted time

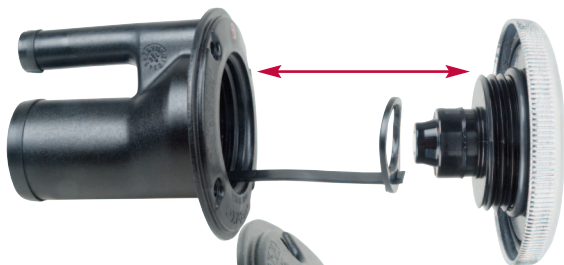

Perko's new EPA style fills come with tethers attached to the fill - but not to the cap. This eliminates the need to unscrew the tether before pressure testing. Then, when the pressure test is done, the tether simply snaps onto the cap. No hassles. No tools. No lost screws. No lost time.

Fills are packed with caps installed. Tethers are fixed in the fills but not attached to the cap. After your system test...

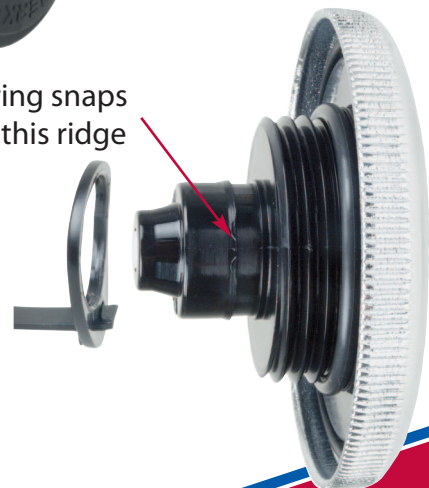

The tether and attachment ring simply pull up...

...so the cap can be snapped on by hand

The ring snaps over this ridge

Once attached the ring allows the cap to turn freely without binding or twisting the tether.
